

Participate in a research study on **type 2 diabetes and obesity**

STAMPEDE

Surgical Therapy and Medications Potentially
Eradicate Diabetes Efficiently

Purpose:

To help understand if medical therapy or bariatric (weight-loss) surgery is more effective in treating patients with type 2 diabetes.

Inclusion:

- Men and women 20-60 years old
- Type 2 diabetes
- Blood test showing elevated sugar levels
- Mild-to-moderate obesity based on weight and height (30-75 pounds overweight)
