

Dr. Leona Cuttler

## Do you have Type 2 Diabetes?

## Did you get diagnosed *before* you were 18 years old?

The doctors and research team at University Hospitals Case Medical Center are conducting a clinical research study to learn more about people who developed Type 2 diabetes at a young age.

People in this study will come to the University Hospital for one 1-hour visit where we will:

- Ask you about you and your family's health and ethnic background.
- Draw some blood

### **Enrollment Criteria**

- You must have received a diagnosis of Type 2 Diabetes when you were less than 18 years of age.
- Patients under 18 must have a parent or guardian willing to be involved in the consent process.

If you are interested in the study please contact Amy Schmidt at University Hospitals Case Medical Center to schedule an appointment.

**For more information or to refer a patient to the study, call  
Amy Schmidt at 216-844-4766 or
